List of Tables

1	Summary of predicted probabilities and minimum and maximum contrasts between derogating and non-derogating countries for emergency policy models	6
2	Complete results from models showing relationship between derogations and emergency policies (H_1)	7
3	Summary of predicted probabilities and minimum and maximum contrasts between derogating and non-derogating countries for human rights models	8
4	Complete results from models showing relationship between derogations and human rights (H_2)	11
5	WHO regions	12
6	States that derogated from regional human rights conventions	13
7	Results from Chaudhry, Comstock, and Heiss (2024) showing the determinants of derogation	14

List of Figures

1	Density plots of prior distributions for model parameters	2
2	Hierarchy of country-week data, showing location and frequency of measured variables	3

3	Hierarchy of region-quarter data, showing location and frequency of measured variables	4
---	--	---

Modeling approach

We use Stan 2.35.0 (Stan Development Team 2023) through R 4.4.0 (R Core Team 2023) and {brms} 2.21.0 (Bürkner 2017) to estimate our models. We generate 4 MCMC chains for each model with 2,000 iterations in each chain, 1,000 of which are used for warmup. All chains converge; we assess convergence with visual inspection.

Complete results from all the models, along with posterior predictive checks, goodness-of-fit measures, and prediction diagnostics are all available at a companion statistical analysis compendium at <https://doi.org/10.17605/OSF.IO/7GVDA>.

Priors

We follow the suggestion of Gelman et al. (2008) and use weakly informative priors for our logistic and ordered logistic regression models. For consistency with prior specification, and for computation efficiency, we mean-center all nonbinary variables so that parameter estimates represent changes from the mean. We use two general priors (see Figure 1):

- For all β terms, we use a Student t distribution with a mean of 0 and a standard deviation of 3. This keeps most parameter estimates around -5 to 5 , with thicker tails that allow for some possibility of extreme values.
- For σ terms related to the variance or standard deviation of parameter distributions, which must be positive, we use a half Cauchy distribution, centered at 0 with a γ of 1

These priors give more weight to realistic areas of parameter values and downweight values in unrealistic spaces. For instance, since logit-scale coefficient values greater than 4 or 5 are highly unlikely, our Student t prior puts more weight on smaller values. Additionally, weakly informative priors allow reasonable and considerable uncertainty in possible parameter estimates.

Figure A 1: Density plots of prior distributions for model parameters

Figure A 2: Hierarchy of country-week data, showing location and frequency of measured variables

Model definitions

H₁: Logistic regression

Binary outcome i across week t within each country j

$$\text{Outcome}_{it_j} \sim \text{Bernoulli}(\pi_{it_j})$$

Distribution parameters

$$\begin{aligned} \pi_{it_j} = & (\beta_0 + b_{0_j}) + \beta_1 \text{Derogation in effect}_{it} + \\ & \beta_2 \text{New cases}_{it} + \beta_3 \text{Cumulative cases}_{it} + \\ & \beta_4 \text{New deaths}_{it} + \beta_5 \text{Cumulative deaths}_{it} + \\ & \beta_6 \text{Past ICCPR derogation}_{it} + \beta_7 \text{Past ICCPR action}_{it} + \\ & \beta_8 \text{Rule of law index}_{it} + \beta_9 \text{Civil liberties index}_{it} + \\ & \beta_{10} \text{Core civil society index}_{it} + \beta_{11} \text{Week number}_{it} \\ b_{0_j} \sim & \mathcal{N}(0, \sigma_0) \end{aligned}$$

Priors

$$\begin{aligned} \beta_{0..11} & \sim \text{Student } t(v = 1, \mu = 0, \sigma = 3) \\ \sigma_0 & \sim \text{Cauchy}(x = 0, \gamma = 1), \text{ lower bound} = 0 \end{aligned}$$

The actual R code for these models is included in the replication code at <https://doi.org/10.17605/OSF.IO/ANONYMIZED-FOR-NOW> This is a simplified representation of the {brms} (Bürkner 2017) model code:

```
# H1: Logistic regression for binary outcomes
brm(
  bf(outcome ~ derogation_ineffect +
    new_cases_z + cumulative_cases_z +
    new_deaths_z + cumulative_deaths_z +
    prior_iccpr_derogations + prior_iccpr_other_action +
    v2x_rule + v2x_civlib + v2xcs_ccsi +
    year_week_num + (1 | country_name)),
  family = bernoulli(),
  prior = c(
    prior(student_t(1, 0, 3), class = Intercept),
```

```

prior(student_t(1, 0, 3), class = b),
prior(cauchy(0, 1), class = sd, lb = 0)),
...
)

```

H₂: Ordered logistic regression

Figure A 3: Hierarchy of region-quarter data, showing location and frequency of measured variables

Model of outcome level *i* across quarter *t* within each region *j*

$$\text{Outcome}_{it_j} \sim \text{Ordered logit}(\phi_{it_j}, \alpha_k)$$

Models for distribution parameters

$$\begin{aligned} \phi_{it_j} = & (\beta_0 + b_{0_j}) + \beta_1 \text{Derogation in effect}_{it} + \\ & \beta_2 \text{New cases}_{it} + \beta_3 \text{Cumulative cases}_{it} + \\ & \beta_4 \text{New deaths}_{it} + \beta_5 \text{Cumulative deaths}_{it} + \\ & \beta_6 \text{Past ICCPR derogation}_{it} + \beta_7 \text{Past ICCPR action}_{it} + \\ & \beta_8 \text{Rule of law index}_{it} + \beta_9 \text{Civil liberties index}_{it} + \\ & \beta_{10} \text{Core civil society index}_{it} + \beta_{11} \text{Quarter number}_{it} \\ b_{0_j} \sim & \mathcal{N}(0, \sigma_0) \end{aligned}$$

Priors

$$\begin{aligned} \beta_{0..11} \sim & \text{Student } t(v = 1, \mu = 0, \sigma = 3) \\ \sigma_0 \sim & \text{Cauchy}(x = 0, \gamma = 1), \text{ lower bound} = 0 \\ \alpha_k \sim & \mathcal{N}(0, 1) \end{aligned}$$

The actual R code for these models is included in the replication code at <https://doi.org/10.17605/OSF.IO/ANONYMIZED-FOR-NOW> This is a simplified representation of the {brms} (Bürkner 2017) model code:

```

# H2: Ordinal logistic regression for ordered outcomes
brm(
  bf(outcome ~ derogation_ineffect +
     new_cases_z + cumulative_cases_z +
     new_deaths_z + cumulative_deaths_z +

```

```
prior_iccpr_derogations + prior_iccpr_other_action +  
v2x_rule + v2x_civlib + v2xcs_ccsi +  
year_quarter_num + (1 | who_region)),  
family = cumulative(),  
prior = c(  
  prior(student_t(1, 0, 3), class = Intercept),  
  prior(student_t(1, 0, 3), class = b),  
  prior(cauchy(0, 1), class = sd, lb = 0)),  
  ...  
)
```

Table A 1: Summary of predicted probabilities and minimum and maximum contrasts between derogating and non-derogating countries for emergency policy models

Table A 5: WHO regions

AFRO: Regional Office for Africa

Algeria, Angola, Benin, Botswana, Burkina Faso, Burundi, Cape Verde, Cameroon, Central African Republic, Chad, Comoros, Congo - Brazzaville, Côte d'Ivoire, Congo - Kinshasa, Equatorial Guinea, Eritrea, Eswatini, Ethiopia, Gabon, Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Madagascar, Malawi, Mali, Mauritania, Mauritius, Mozambique, Namibia, Niger, Nigeria, Rwanda, St. Helena, São Tomé & Príncipe, Senegal, Seychelles, Sierra Leone, South Africa, South Sudan, Togo, Uganda, Tanzania, Zambia, and Zimbabwe

AMRO: Regional Office for the Americas

Anguilla, Antigua & Barbuda, Argentina, Aruba, Bahamas, Barbados, Belize, Bermuda, Bolivia, Brazil, British Virgin Islands, Canada, Cayman Islands, Chile, Colombia, Costa Rica, Cuba, Curaçao, Dominica, Dominican Republic, Ecuador, El Salvador, French Guiana, Grenada, Guatemala, Guyana, Haiti, Honduras, Jamaica, Mexico, Nicaragua, Panama, Paraguay, Peru, St. Barthélemy, St. Kitts & Nevis, St. Lucia, Saint Martin (French part), St. Vincent & Grenadines, Sint Maarten, Suriname, Trinidad & Tobago, Turks & Caicos Islands, United States, Uruguay, and Venezuela

EMRO: Regional Office for the Eastern Mediterranean

Afghanistan, Bahrain, Djibouti, Egypt, Iran, Iraq, Jordan, Kuwait, Lebanon, Libya, Morocco, Palestinian Territories, Oman, Pakistan, Qatar, Saudi Arabia, Somalia, Sudan, Syria, Tunisia, United Arab Emirates, and Yemen

EURO: Regional Office for Europe

Albania, Andorra, Armenia, Austria, Azerbaijan, Belarus, Belgium, Bosnia & Herzegovina, Bulgaria, Croatia, Cyprus, Czechia, Denmark, Estonia, Finland, France, Georgia, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Kazakhstan, Kosovo, Kyrgyzstan, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Monaco, Montenegro, Netherlands, North Macedonia, Norway, Poland, Portugal, Moldova, Romania, Russia, San Marino, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Tajikistan, United Kingdom, Türkiye, Turkmenistan, Ukraine, and Uzbekistan

SEARO: Regional Office for South-East Asia

Bangladesh, Bhutan, North Korea, India, Indonesia, Maldives, Myanmar (Burma), Nepal, Sri Lanka, Thailand, and Timor-Leste

WPRO: Regional Office for the Western Pacific

American Samoa, Australia, Brunei, Cambodia, China, Cook Islands, Fiji, French Polynesia, Japan, Kiribati, Laos, Malaysia, Marshall Islands, Micronesia (Federated States of), Mongolia, Nauru, New Zealand, Palau, Papua New Guinea, Philippines, South Korea, Samoa, Singapore, Solomon Islands, Tonga, Tuvalu, Vanuatu, and Vietnam

Table A 6: States that derogated from regional human rights conventions

States that derogated from the ACHR	Also submitted ICCPR derogation	States that derogated from the ECHR	Also submitted ICCPR derogation
Argentina	Yes	Albania	No
Bolivia	No	Armenia	Yes
Chile	Yes	Azerbaijan	Yes
Colombia	Yes	Estonia	Yes
Dominican Republic	Yes	Georgia	Yes
Ecuador	Yes	Latvia	Yes
El Salvador	Yes	Moldova	Yes
Guatemala	Yes	North Macedonia	No
Honduras	No	Romania	Yes
Jamaica	No	San Marino	Yes
Panama	No	Serbia	No
Paraguay	Yes		
Peru	Yes		
Suriname	No		
Venezuela	No		

ACHR = American Convention on Human Rights; ECHR = European Convention on Human Rights

Table A 7: Results from Chaudhry, Comstock, and Heiss (2024) showing the determinants of derogation

	Model 1	Model 2
Intercept	0.00217 (0.00093) ^{***}	0.0044 (0.0021) ^{***}
Pandemic backsliding (PanBack)	7.1 (6.5) ^{**}	
Pandemic violations of democratic standards (PanDem)		0.29 (0.29)
New cases (standardized)	0.33 (0.40)	0.42 (0.51)
New deaths (standardized)	1.66 (0.44) [*]	1.64 (0.43) [*]
Cumulative cases (standardized)	0.015 (0.033) [*]	0.0067 (0.0152) ^{**}
Cumulative deaths (standardized)	3.6 (1.7) ^{***}	4.3 (2.1) ^{***}
Rule of law index	1.99 (0.87)	1.27 (0.58)
N	9591	9591

Dependent variable = derogation submission

* p < 0.1, ** p < 0.05, *** p < 0.01
